

Cable Spine

Cable Spine is a flexible vertical cable management solution with the option to add extra links. This makes it the ideal choice of cable management for height-adjustable desks.

The weighted base features soft neoprene on the underside, allowing it to grip and protect hard floors.

It's quick and easy to install, and the included application tool makes light work of inserting cables.

Cable Spine has several unique and user-friendly features:

A top mounting clip that can be screwed under the worksurface or hooked through a cable basket. The mounting clip also features several cable tie loops for securing cables, preventing strain on electrical connections.

Highly flexible plastic construction, with exceptional memory characteristics, that allows cables to be easily “zipped” into the Cable Spine with the included application tool. This flexibility also means that cables can be removed just as quickly and easily.

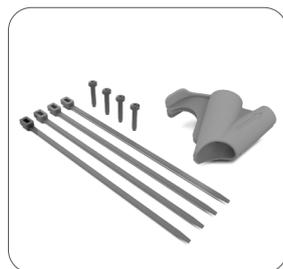

A twin-channel design so that power and data cables can be segregated if desired.

At the bottom of Cable Spine is a heavily weighted base that features a soft and grippy pad on the underside, as well as several cable tie loops for securing cables in place.

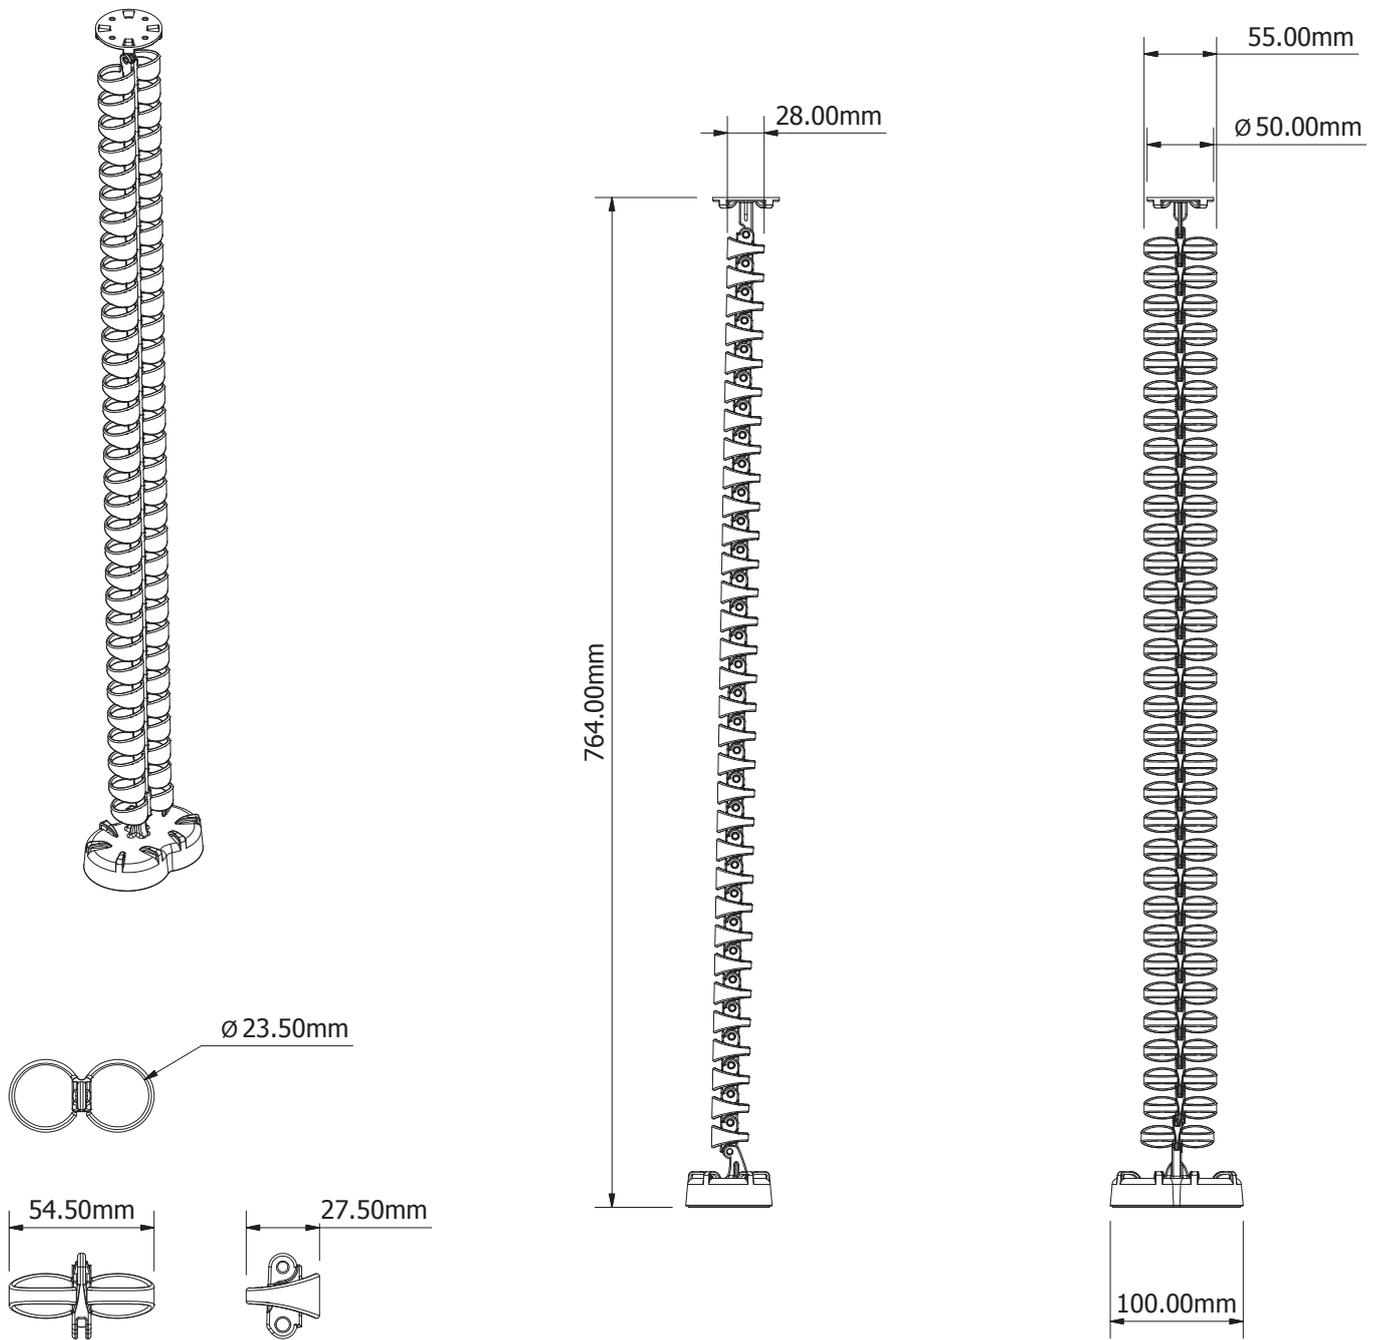

Can be purchased with 24 extra vertebrae to convert the standard Cable Spine for use on height-adjustable desks. The additional links can also be used to provide horizontal cable management for inside cable baskets or trays.

Mounting screws, cable ties and application tool are all included in the box.
