

Mesh Slim

Cable Mesh Slim offers a highly functional and cost-effective solution for managing cables between sit-stand workstations and power or data sources at lower levels.

Constructed from a flexible, stretchy mesh fabric, Mesh Slim not only keeps messy cables tidy and safe but also enhances the appearance of any desk setup.

With a full-length Velcro closure, Mesh Slim makes light work of adding a multitude of cables and reconfiguring them later is just as easy.

A hook secured with Velcro at each end of the product enables the installer to secure Mesh Slim to the supplied mounting bracket, to cable trays, cable baskets or floor boxes.

solutions

Cable Mesh Slim has several unique and user-friendly features:

A simple hook and screws are provided for mounting under the desk surface.

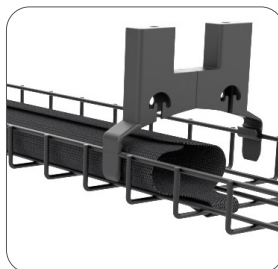

A loop secured by Velcro is integrated into each end of Mesh Slim, making it simple to mount the product to existing structures under the work surface, such as Adapt's range of cable baskets.

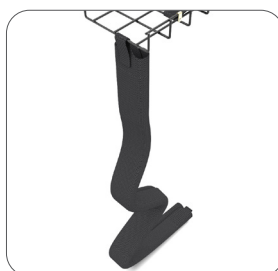

The mesh fabric has a full-length Velcro closure enabling cables to be added or removed with ease.

The integrated loops allow Mesh Slim to be secured at the base if required.

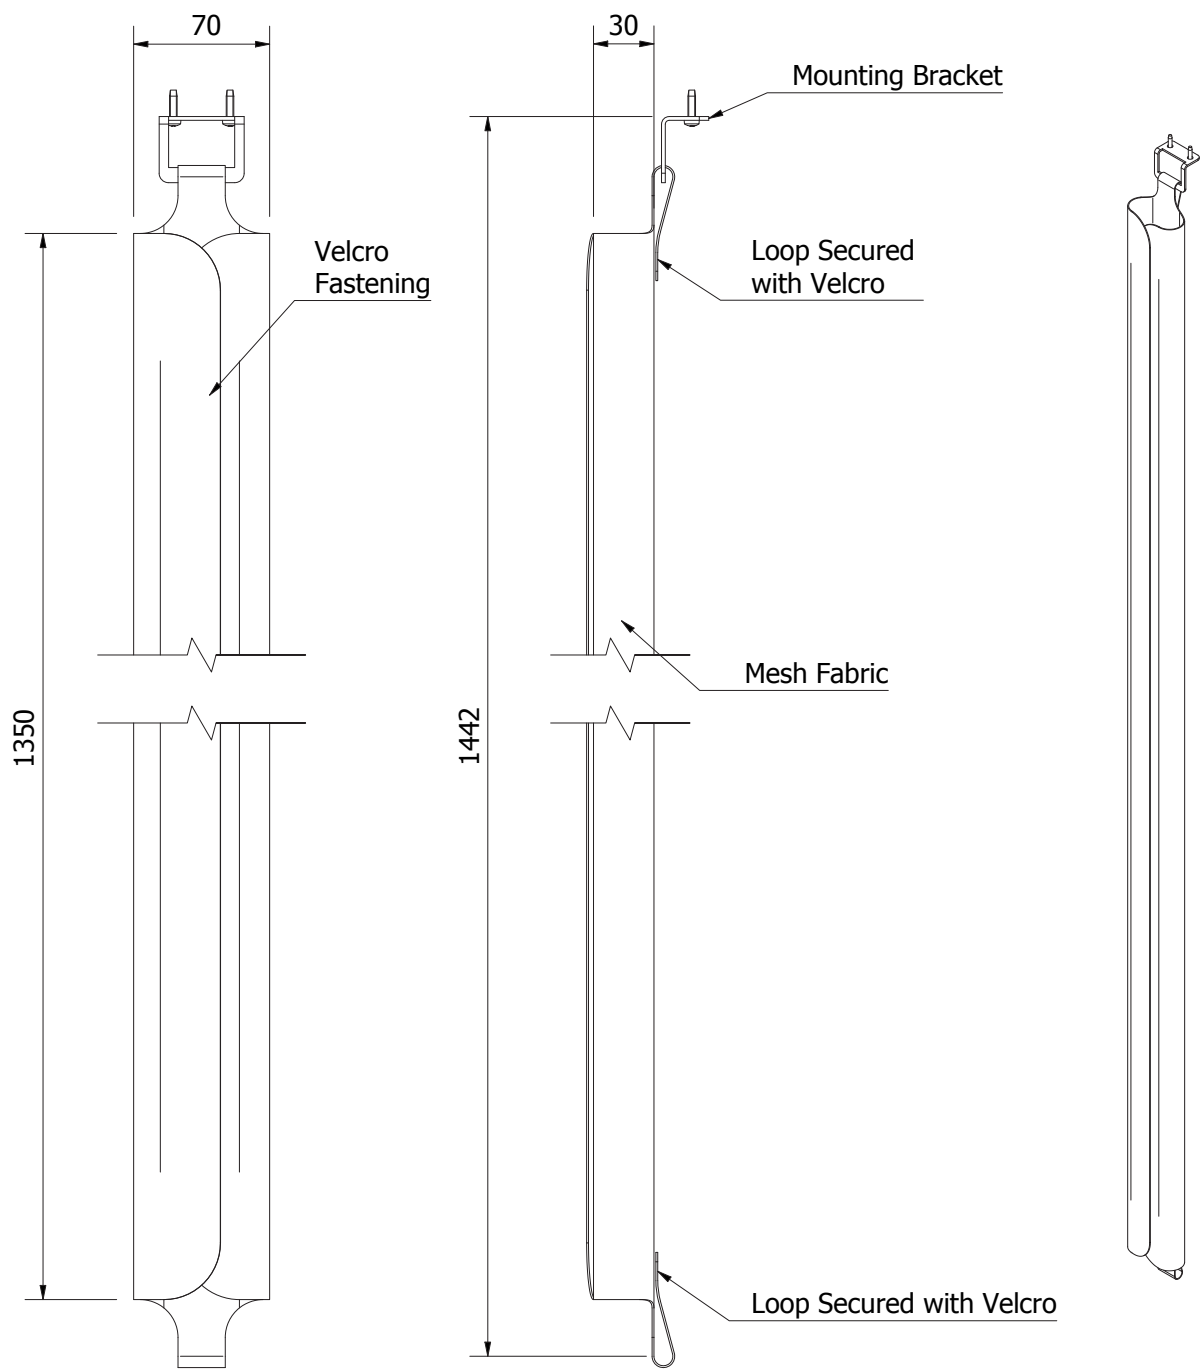

Mesh Slim can also be adapted for use as a horizontal cable manager inside cable baskets and trays.

The hi-tech mesh fabric not only hides cables from view, but is lightweight, tough, breathable, and has 4-way stretch.
